

Jivahar Redistribution Portal: FAQs

Q1: How do donors list a food donation?

Donors log into the portal, click 'Create Donation', and input the food name, quantity, preparation timestamp, and storage conditions. They can upload an image for CNN-based food category classification.

Q2: How are volunteers notified of a pickup?

Nearby volunteers receive an automated push notification detailing the food category, priority, and pickup location. Volunteers can click 'Accept Task' to navigate to the donor.

Q3: What should a volunteer do if the food fails inspection?

If the food smells sour, is moldy, or has a broken seal, the volunteer must tap 'Reject Pickup' in the app, select the rejection reason, upload a photo, and inform the donor. The task is then canceled.

Q4: How do NGOs claim food?

NGOs set their preferences (e.g., veg/non-veg, capacity limits). When a donation matches their profile, the system suggests the match, and the NGO has 15 minutes to accept the recommendation before it is routed to another NGO.

Q5: What happens when an NGO rating drops below 4.0?

NGOs with a rating below 4.0 are put on a probationary list. They receive lower matching priority and are restricted to receiving non-perishable dry rations until they complete a food safety refresher course.

Q6: How does the system handle high-priority infant milk requests?

Infant milk requests trigger an instant priority matching algorithm. The system matches the request with any nearby dairy donor and dispatches a dedicated volunteer via high-speed dispatch route, enforcing a strict 30-minute delivery SLA.
