

NGO Food Distribution Guidelines & Proximity Scope

1. Scope and Objective

This policy outlines operating rules for NGOs participating in the Jivahar food distribution system. NGOs must align their storage capability and matching thresholds to donation categories.

2. Matching and Distribution Priority

Hot cooked meals must be matched to NGOs within a 5 km radius of the donor to ensure transport time does not exceed 45 minutes, minimizing the duration in the Temperature Danger Zone. Dry rations (grains, lentils, canned goods) can be matched to NGOs within a 20 km radius.

3. Capacity and Storage Matching

Perishable donations require the receiving NGO to possess verified refrigeration units. Donations exceeding 50 kg can only be routed to tier-1 NGOs with active cold storage chambers and at least 5 volunteers available for immediate sorting and distribution.

4. Rating and Track Record Compliance

The platform assigns priority matching to NGOs with high ratings (above 4.0). Ratings are calculated based on response speed, successful delivery logs, and food safety reviews submitted by volunteers and donors.

5. Emergency Priority Allocations for Child Care Shelters

Dairy, fresh baby food, and pasteurized milk requests are granted tier-1 priority. These perishable donations are instantly matched to child care shelters and orphanages located within a 3 km proximity, bypassing standard volunteer queues to enable direct emergency courier dispatch.

6. Large Scale Donation Logistics

Food donations exceeding 100 kg must be routed strictly to regional food banks. Such matches trigger a volunteer transport dispatch alert, requiring a team of at least 3 volunteers equipped with food-grade insulated carrying crates to manage the logistics.
